AERA – Product Specification Document

AERA is a habit, emotion, sleep, and task tracking web application designed to help users build consistency, self-awareness, and balance without pressure. This document outlines the functional, technical, and UX specifications of the project for testing and review purposes.

1. Core Features

- Habit Tracking: Weekly habit cards with 7-day checkboxes, streak tracking, and habit diffusion (soft delete).
- Emotion Logging: Monthly emotion calendar with emoji indicators and detailed notes per day.
- Sleep Tracking: Daily sleep duration logging with analytics visualization.
- Task & Reminders: Task list with reminders and timers.
- AI Chat & Insights: AI-powered reflections, habit insights, and correlations between habits, sleep, and emotions.
- Analytics Dashboard: Donut charts for daily and weekly overview, habit consistency heatmaps, and momentum indicators.

2. AI System & Credits

- Daily free AI credits for all users.
- Credit-based AI chat usage (1 message = 1 credit).
- Paid credit packs available via billing system.
- AI insights appear as soft, non-intrusive overlays on app open.

3. Billing & Monetization

- Free Plan: Limited daily AI credits.
- Starter Pack: One-time purchase AI credit pack.
- Pro Pack: Higher-value AI credit pack.
- Payment Gateway: Razorpay (India) / Stripe (Global-ready).
- All payments verified server-side before credit allocation.

4. UI / UX Design Principles

- Mobile-first, responsive layout.
- Pastel color palette with calm, minimal aesthetics.
- Soft animations using Framer Motion.
- Gradient-based onboarding experience.
- Clear visual hierarchy and accessibility considerations.

5. Technical Stack

- Frontend: Next.js (App Router), React, Tailwind CSS, shadcn/ui.
- Backend: Supabase (Auth, Database).

- AI: Google Gemini API.
- Payments: Razorpay / Stripe.
- Deployment: Vercel.
- Version Control: GitHub.

6. Testing & Quality Assurance

- Manual functional testing for core flows.
- Mobile responsiveness testing.
- AI credit enforcement testing.
- Payment flow testing in sandbox mode.
- Long-term usage testing via analytics (Google Analytics).
